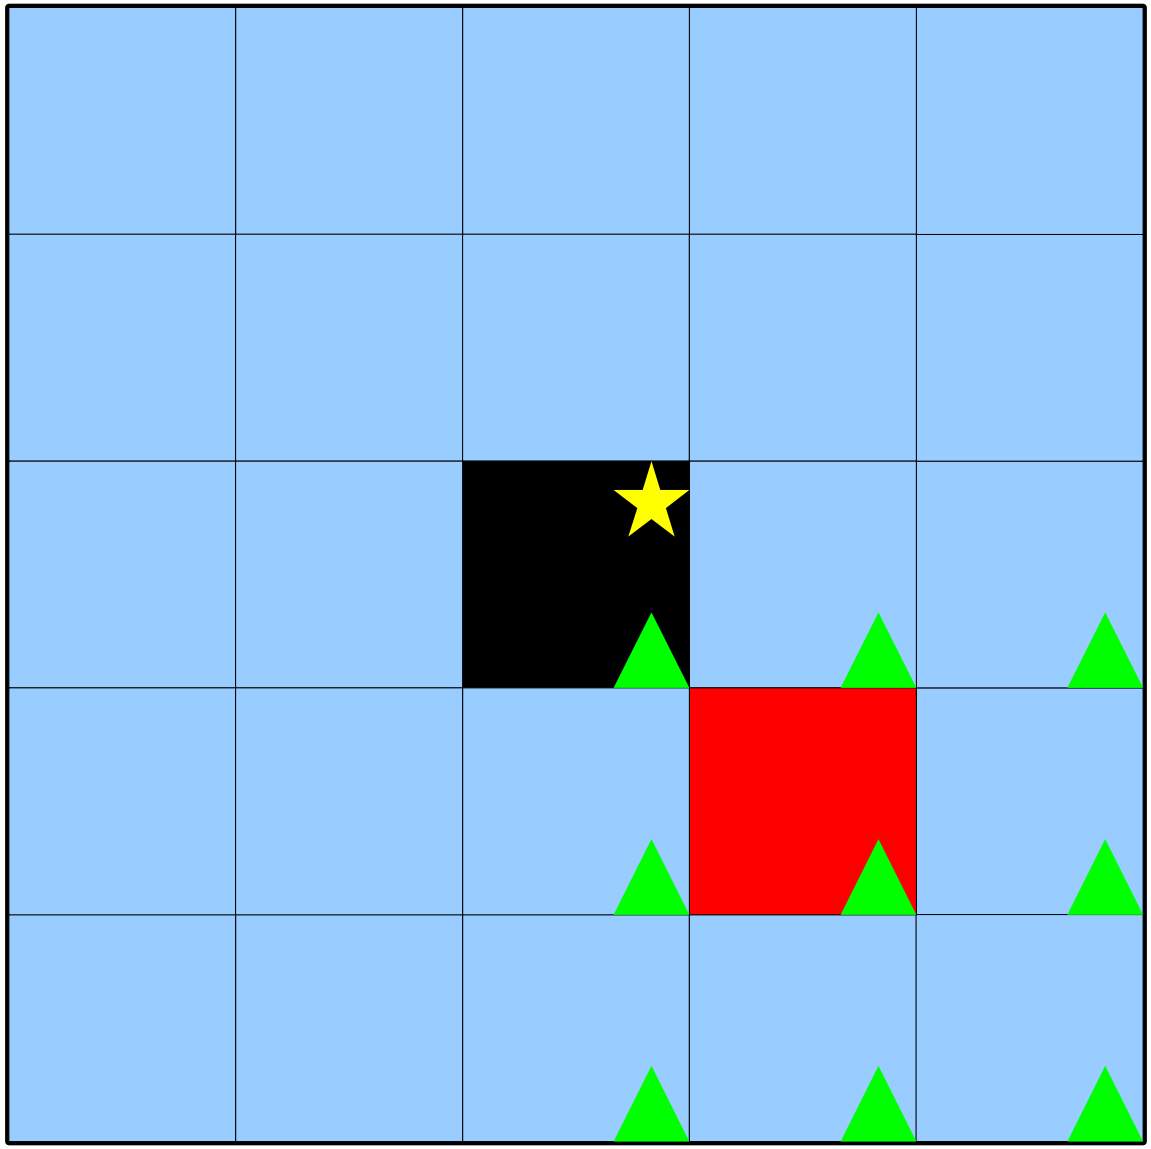
Exclusive 2 tracks data: EVD images

Dominik Wrana

Track energy in a calorimeter



(Extrapolated) Track hit

Tower hit

Hottest tower

Finally Picked towers

Method of a central calorimeter cleaning

E_Track1 – energy from 9 towers around hottest one (with it) for 1st track

E_Track2 – energy from 9 towers around hottest one (with it) for 2nd track

E_Tracks = E_Track1 + E_Track2

E_All – energy from all towers in a central region

Cut:

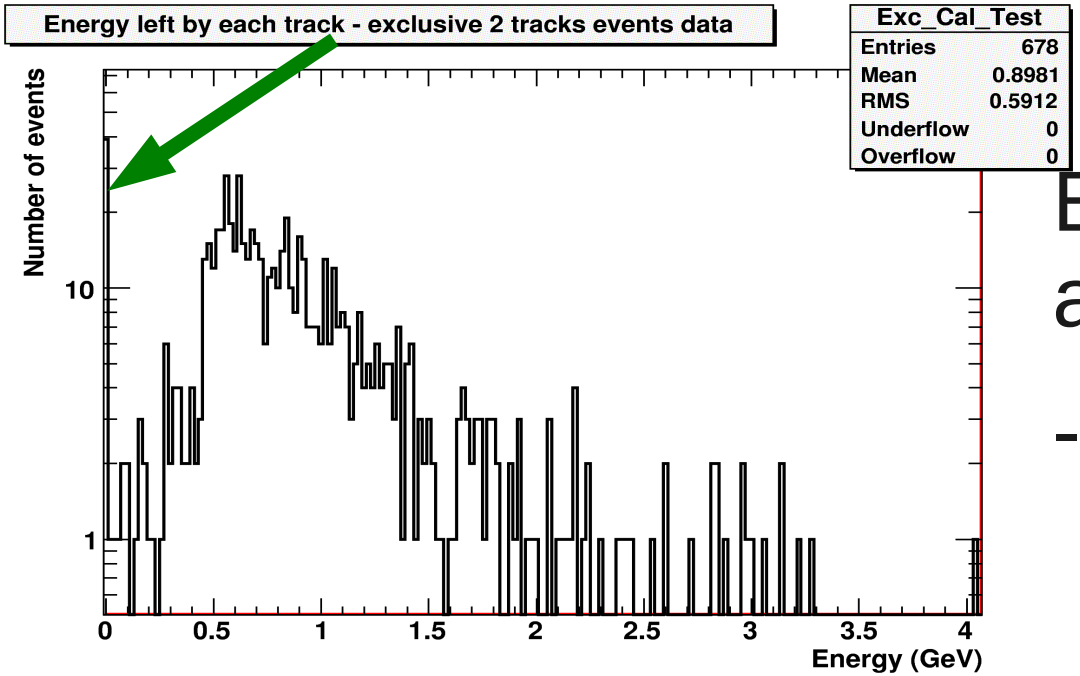
E_All – E_Tracks > 0.96 * 1 GeV

Cuts:

After:

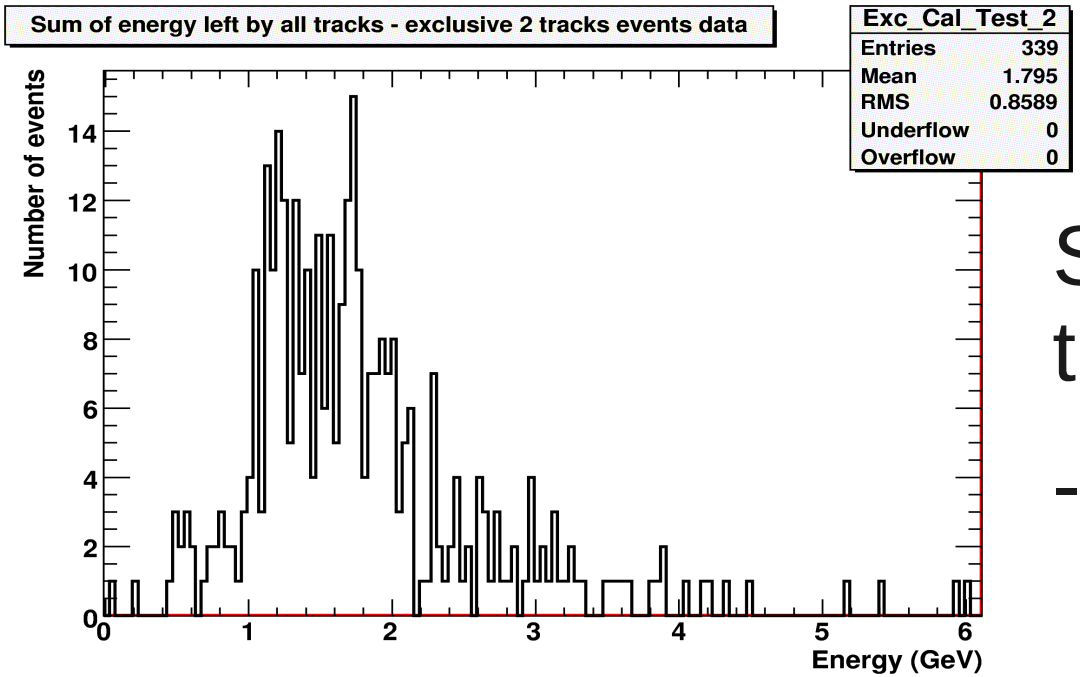
- gaps cuts	80714
- beam halo cuts	60116
- side cal cleaning	19887
- 2 tracks, opposite charge	1097
- Muons, cosmics	1035
- GoodTrack demand	873
- Not-the-edge-hit	792
- Exclusivity cuts	339
- Bad extrapolation cut	**338**

Energy left by tracks in a calorimeter



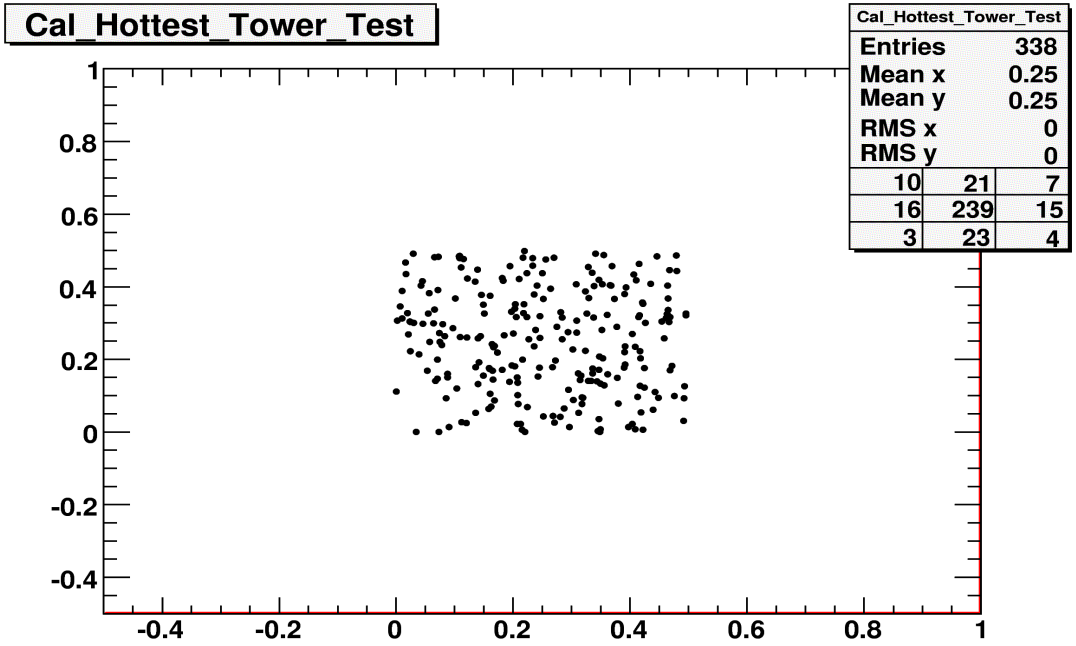
Energy gathered from around each track hit

- 39 events with 0 energy



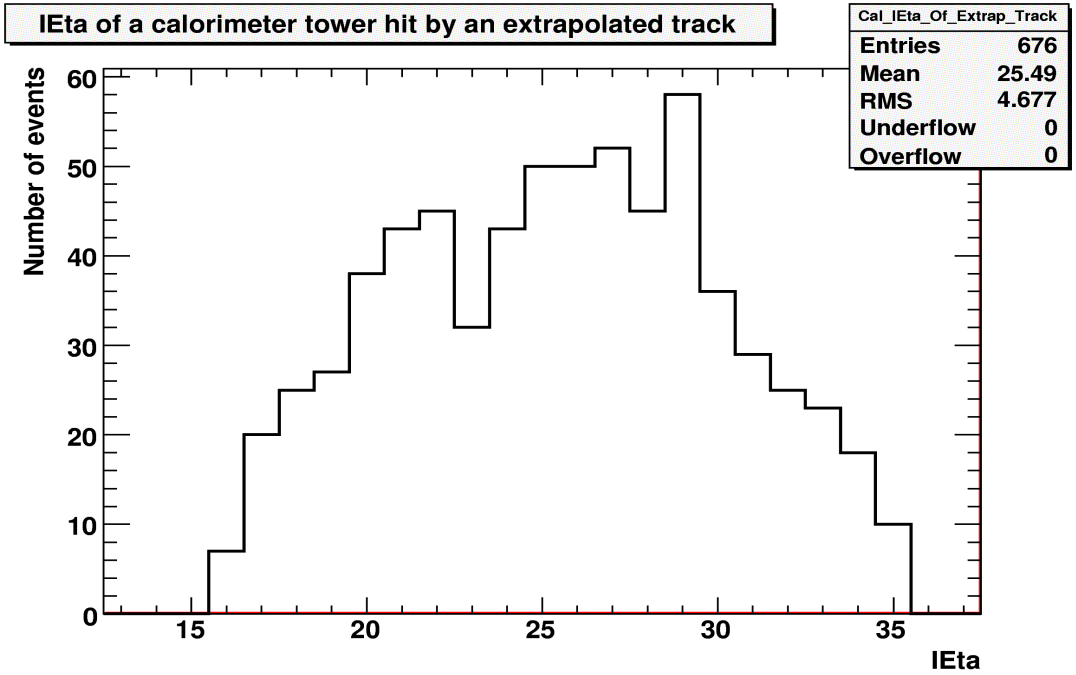
Sum of energy from both tracks hit

- 1 event with 0 energy



Which tower from around the hit tower is the hottest one.

- 240/340 – the hit one

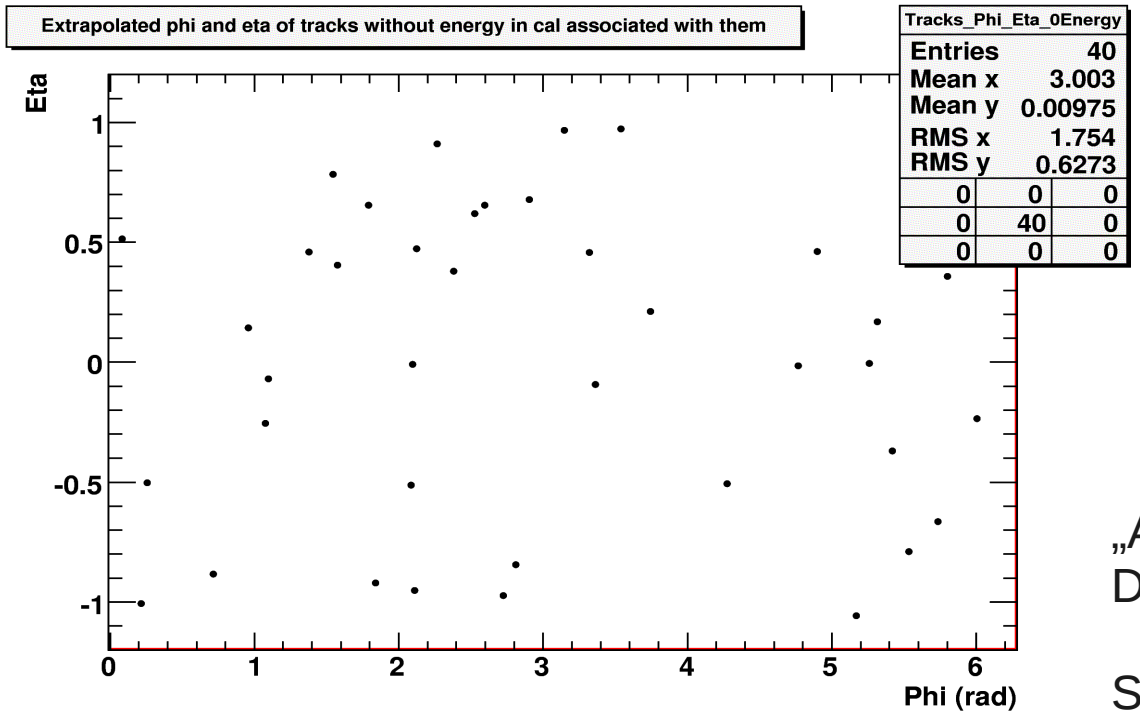


Ieta of a hit tower

- to check how often track hits the edge

Crack detector:

CCR tile: 22.5 x 5 x 0.5 cm 1 tile/Tower



„A Scintillating Tile/Fiber Preshower Detector for the CDF Central Calorimeter"
