

Exotic group and 6.1 MC

Winter 2005/6:

Lots of analyses still thinking ...

Main worry of course timescale for conferences.

Analyses that already decided (for instance trileptons) : 5.3 MC

After that: looking forward to use 6.1 MC, also because of the included functionalities.

New tarball:

A few people in the exotics group have started trying it out. Do not have an actual sample yet.

From all of us: THANKS to Phil and Hugo for the instructions!

Validating 6.1 MC?

Due to tempered interest in 6.1 MC at this point probably only limited physics validation from the exotic group

Will continue to do test with new tarball and give feedback from users.
