

Monitoring & Control Systems

- Golden opportunity today—beam studies with no CDF data-taking
 - Finished Windows security patches on:
 - CLC1
 - CDF51683 (Muon Scintillator)
 - CDFEPHV
 - SVXIICON
 - COT2
 - TOF1
 - Only remaining PCs in control room:
 - VNODE1
 - VNODE2
 - SOLENOID2
 - COT3
 - Lost opportunity: no MUON3 work (probably couldn't do both simultaneously anyway)

Monitoring & Control Systems

- Online systems computer / network security
 - iFIX usernames / passwords
 - Make lists for SciCo and ops managers
 - Remove all usernames / passwords from consoles and documentation
 - Rethinking security: writing down passwords good if location is secure and it allows you to change passwords more frequently
 - Must get rid of MUON3 by November!
- Mark Knapp moving to BEG (FESS Mechanical Group near SiDet) October 3
 - CDF still top priority
