

Monitoring & Control Systems

- Current long shutdown due to “blown-up” spool piece (higher-order correction magnet) at B17
 - Fortunately, did not require reconstruction of cryo bypass; current estimate for first circulating beam—December 8 (week from Thursday). Note, probably some period of studies to recover to collisions.
 - Perfect opportunity...Yeongdae, do you hear me? Also, Mark and Jim working on installing Norton Ghost on PCs.

Monitoring & Control Systems

- VNODE1
 - Last Wednesday, VNODE1 died—complained could not read registry on boot.
 - We moved Global Alarms and HV Summary over to SOLENOID2; so far, has worked pretty well, except Sunday processes all froze. Rebooted with no problems.
 - Had disk image on F: drive of C: drive. However, Mark Kanpp tried to restore from F: and found it did not work. This means he will have to restore from DVD backups, which will take a few days.
 - Currently, he and Jim Loskot are working on installing and testing Norton Ghost, which does make usable disk images on 2nd disk. Will continue doing this through shutdown.
