

HW/SW Status

- ▶ PC \Rightarrow PC measurements in progress
 - can successfully send/receive TL2D with 2 PC's
 - algorithms run successfully
 - verified L2 bitmask
 - we see confusing io times with single PC
 - trying to understand this
 - need to synch timing when using 2 PC's
 - incorporate back-channel & use timestamp counter on a single PC

- ▶ kernel module replacement for io_rcc
 - advantage = disable interrupts
 - simple interface to control solar/filar
 - synchronization problems seen in timing measurements on single PC
